

## 830 MARKSMAN™ & 831 MARKSMAN™ TANTO

The strong lock system engagement is so strong it's virtually a fixed blade!

### SLS (STRONG LOCK SYSTEM)

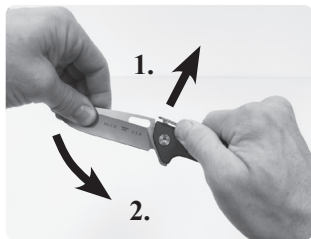

Fully opening the blade with either the blade hole or flipper securely engages the SLS, a locking engagement that provides the strength of a fixed blade.

### OPERATING INSTRUCTIONS

#### TO OPEN:

Position finger tip on flipper. Quickly pull finger back into hand along lock strap.

#### TO CLOSE:

1. Hold top of blade.  
Be sure to control the blade as the ball bearing system greatly minimizes any friction allowing the blade to close quickly. Push lock strap up with thumb.
2. Rotate blade closed.
