

898 IMPACT AUTOMATIC KNIFE

The Impact automatically opens with the push of a button, readying the S30V steel blade for quick action. The button lock style keeps the knife locked open and or closed. To prevent accidental deployment a safety switch is integrated into the knife. The aluminum handle has a textured rubber inlay which creates a secure grip, while offering a lightweight material.

OPERATING INSTRUCTIONS

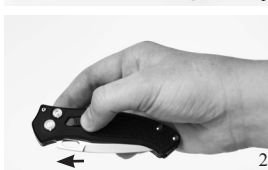

To Open

1. Hold handle securely and use your thumb to retract the safety switch, pulling it back until you see the red area, signifying that the knife is ready for deployment.
2. Deploy the blade by pressing the deployment button located near the blade. See above diagram.

To Close

1. To close blade, hold handle securely and use your thumb to press the deployment button while your finger, or other hand, pushes the blade closed. Once blade is partially closed, release the deployment button to allow it to hold the blade closed.
2. To prevent unintended button actuation, hold handle securely and use thumb to push the safety switch up, showing no red area.

Due to the complex and changing nature of knife laws, it is the knife user's responsibility to investigate whether the purchase, possession and use of this knife comply with federal, state and local knife laws applicable to the user.
